Part 2 Index to Volumes 8-20, 1966-1978

A Journal of Statistics for the Physical Chemical and Engineering Sciences

Technometrics

Published Quarterly by:

The American Society for Quality Control and The American Statistical Association

TECHNOMETRICS

The purpose of Technometrics is to contribute to the development and use of statistical methods in the physical, chemical, and engineering sciences. This objective places a high premium on clear communication among the physical scientist, engineer, statistician, and mathematician, as well as the experimenter in any of these fields. The journal will accept for publication papers describing new statistical techniques expected to be useful in these sciences, papers illustrating the application of known statistical method to new or novel environments, expository or tutorial papers on particular statistical methods, and papers dealing with the philosophy and problems of applying statistical methods to research, development, design and performance. *Every article shall include adequate justification of the application of the technique preferably by means of a numerical example of application to a real problem in the physical, chemical, or engineering sciences.* Only rarely will papers requiring more than fifteen journal pages of print (about 25 double-spaced typed manuscript pages) be accepted. Brief descriptions of problems requiring solution and short technical notes will also be accepted for publication. Letters to the Editor, signed by the author and limited in length, will be published when they are considered timely and appropriate. All papers *must* contain a short but clear summary of contents and conclusions. Technical derivations should be placed in an appendix.

Subscription Rates

The annual subscription rate for members of the American Society for Quality Control or the American Statistical Association is $10.00 a year. The annual subscription rate for nonmembers is $15.00 a year.

Members of the sponsoring societies, the American Society for Quality Control and the American Statistical Association, may subscribe to the journal while paying their annual dues or by check or money order made out to Technometrics and mailed to:

TECHNOMETRICS
Post Office Box 587
Benjamin Franklin Station
Washington, D. C. 20044

All non-member subscriptions should be mailed to this address. Communications concerning changes of address, subscriptions, back numbers, etc., should also be sent to this address. Whenever possible, a copy of the address taken from an issue of the periodical should accompany a change of address request. All issues of TECHNOMETRICS are currently available on microfilm from University Microfilms, Inc., 300 North Zeeb Road, Ann Arbor, Michigan 48106. All subscription fees are payable in the currency of the United States of America.

Communication concerning *membership* in either of the sponsoring societies should be sent to that society.

TECHNOMETRICS

Index to Volumes 8-20, 1966-1978

Introduction to the Indexes

The following five indexes have been prepared as a service to the subscribers to this journal:

	Pages
Author Index	509–549
Subject Index	550–610
Books Reviewed Index	611–624
Book Reviewers Index	625–627
Letters to the Editor Index	628–629

Items in the author index have been given reference numbers. These numbers are used to cross-reference the subject index to the author index.

The journal references in the subject index consist only of the volume number and inclusive pages. While this is sufficient to identify an item, a complete reference that includes author, title, month and year can be obtained from the author index by means of the item reference number.

Books reviewed are listed alphabetically by first author, and have been identified by numbers preceded by a B for cross-referencing to the book reviewers index.

Letters are listed alphabetically by author and have been identified by numbers preceded by an L for cross-referencing to the author index.

The indexes were prepared by Dr. George E. Policello II of the Department of Statistics, The Ohio State University. It is a pleasure to acknowledge his careful and exhaustive work on this project.

Lloyd S. Nelson, Chairman
Technometrics Management Committee

Subject Index

SUBJECT	REF.	VOL.	PAGES
A			
α-acceptability			
evaluation of regression coefficients using ——	601:	20	131–139
Absolute deviation, sample mean (see Mean absolute deviation)			
Abstracts and summaries of papers presented at annual meetings	—:	8	203–211
	—:	9	185–194
	—:	10	419–427
	—:	11	211–221
	—:	12	191–206
Accelerated life tests (see Life tests, accelerated)			
Acceptance sampling (also see Sampling plans)			
Bayesian, restricted double plans	454:	12	647–667
by attributes			
ASN for truncated single and double plans	193:	10	685–692
ASN function for curtailed single plans	361:	18	307–312
average sample number for truncated double plans	333:	13	811–816
(correction)	333:	14	987
curtailed three class	775:	19	159–166
determination for given strength	359:	19	211–212
graphical derivation of single-stage	520:	19	99–100
(letter)	520:	19	351
new prior for ——	153:	16	93–102
single sampling plans based on linear cost and a prior	334:	13	483–498
three class plans	118:	15	575–585
cost based dual purpose quality control systems	765:	15	151–166
curtailed —— plans			
attributed sampling	169:	12	295–298
multiple sampling to estimate fraction defective	774:	16	311–315
simplified form for ASN	776:	14	925–930
double sampling			
for lot average	255:	16	435–439
to control variance in net weight	81:	16	539–543
on the normal distribution with variance as criteria	927:	10	99–106
group testing with test error present	731:	14	113–122
mixed plans, procedures and tables	764:	11	341–372
multiple plans viewed as finite Markov chains	134:	13	371–383
(letter)	134:	14	242
optimal plans with grouping	596:	17	315–320
screening based on normal distribution	682:	19	65–68
unknown-sigma based on a wide class of distributions	831:	14	669–678
variables ——, a summary with emphasis on non-normality	679:	11	631–637
Acceptance sampling, sequential			
modified binomial and hypergeometric sampling	336:	11	639–647
multiple plans viewed as finite Markov chains	134:	13	371–383
(letter)	134:	14	242
Accuracy			
and the statistical comparison of measuring instruments	328:	15	53–66
of numerical matrix inversion	288:	19	513–514
Adaptive			
distribution free regression	426:	17	399–407
M-estimator applied to a selection problem	627:	20	255–263
nonparametric classification	695:	11	775–792
method for selection of population with largest location parameter	715:	15	769–778
self-modeling			
curve resolution	535:	13	617–633
nonlinear regression	536:	14	513–532
Addelman			
2^{n-9} resolution V-plan	706:	8	705–707
Additivity (also see Non-additive data)			
transformation to ——, a necessary and sufficient condition	763:	12	388–393
Adjusted residuals (see Residuals)			
Aerospace			
airframe costs and application of Welch's t-statistic to obtain confidence intervals	209:	17	57–60
class of probability distributions for aircraft flight path analysis	133:	15	365–378
estimation of parameters for compound Weibull distribution	270:	12	399–407
unmodeled error analysis on trajectory and orbital estimation	136:	13	303–314
Age replacement			
consistent estimation of —— intervals	439:	18	213–219
optimum —— policy for increasing cost	758:	13	139–144
problem for truncated normal, gamma or Weibull distributions	307:	9	83–91
with adjustment and depreciation costs and interest charges	160:	16	235–239
with discounting	714:	18	459–465

SUBJECT	REF.	VOL.	PAGES
Aircraft (see Aerospace)			
Air pollution (see Pollution)			
Air quality (also see Pollution)			
related to extreme-values from a lognormal distribution	788:	14	703–711
Alarm level			
flame failure control system, discrete time Markov processes	2:	12	851–866
Algorithm			
all possible regressions, —— for residual sums of squares	294:	16	499–511
all possible subsets of variables in discriminate analysis	600:	17	103–109
analyzing 2^n3^m factorial experiments	589:	9	245–259
branch-and-bound solution of restricted least squares	21:	18	447–451
construction of D-optimal designs	624:	16	203–210
derivative-free —— for nonlinear least squares	713:	20	7–14
deriving optimal block designs	473:	18	451–458
implicit nonlinear regression	739:	18	161–173
least squares estimation in non-linear models	346:	15	209–218
Nelder-Mead simplex procedure for function minimization	674:	17	45–51
(letter)	674:	17	393–394
non-iterative estimation of missing values in crossed classifications	383:	15	631–636
parameter estimation for nonlinear implicit models	123:	15	233–247
results on choice of sum and sum-of-product ——	920:	13	657–665
run orders requiring minimum number of factor levels changes	213:	16	31–37
two-sided approximate tolerance intervals	299:	8	115–122
variance components estimation	452:	18	11–17
improved —— for the W-transformation	399:	18	207–211
restricted maximum likelihood estimation	183:	18	31–38
Yates' ——			
extension of —— for 2^n designs	181:	10	575–577
inverse ——	433:	8	177–183
Aliasing			
orthogonal main-effect 2^n3^m designs and two factor interaction ——	587:	10	559–573
Allocation			
nearly optimal —— for experimental units using a covariate	381:	16	589–599
optimal —— of observations, treatment versus control	62:	14	423–436
Alloys			
atom probe and Markov chain statistics of clustering	464:	16	483–493
Analysis of covariance (see Covariance analysis)			
Analysis of variance (also see Experimental design)			
approximate F-statistic	880:	10	597–604
estimating degrees of freedom for linear combinations of mean squares (Satterthwaite formula)	303:	11	691–706
type I error and power for Satterthwaite ——	204:	14	555–569
Bayes approach to unequal variances in ——	542:	17	95–102
balanced incomplete block designs with identical blocks	704:	11	613–615
balanced optimal 2^m fractional factorial designs	815:	13	257–269
catalogue of small incomplete factorial designs	879:	13	243–256
(correction)	879:	15	951
chain-pooling for two-level replicate-free factorial experiments	430:	11	725–746
combined with principle components	800:	14	47–62
compared to harmonic components of variance	442:	11	75–90
doubly telescoping sequences of blocks	431:	13	559–574
(letter)	431:	15	947
exact —— for unequal variances	83:	20	419–430
exponential distribution ——	778:	14	355–370
factorial designs and the X'X criteria	107:	13	731–742
fitting empirical surfaces to physical and chemical data	567:	11	411–429
latin squares of order 15, set of three mutually orthogonal	391:	13	696–698
linear combinations in designing experiments	463:	13	575–588
missing values			
iterative procedures for ——	705:	13	743–753
non-iterative estimation for crossed classifications	383:	15	631–636
nested designs			
three stage with composite samples	252:	16	409–417
two-stage	515:	9	373–389
	13:	9	499–516
two-stage, comparison of designs and estimators	846:	17	37–44
new model for non-additive data	568:	13	1–18
operators for computations in ——	287:	11	511–526
optimal design for two noninteractive treatments	115:	19	53–57
orthogonal main-effect plans for estimating all two-factor interactions in the 2^n3^m factorial series	586:	11	747–762
(correction)	586:	12	721
outlier rejection in factorial designs	817:	14	469–479
patterns in residuals for the two-way layout	199:	20	385–395
portable power	891:	16	193–201
pitfalls of ——	111:	16	349–352
random effects			
estimation of population mean	499:	9	577–585
tests for main effects and interactions	645:	16	17–25
randomization	919:	14	13–22

SUBJECT	REF.	VOL.	PAGES
residuals and variance patterns	220:	14	101–111
sequential Youden square	208:	12	147–152
small sample behaviour of four tests of mean equality	127:	16	129–132
spectrum of a model II nested ——	444:	11	91–102
transformation			
computing estimates for mixed models with the W ——	398:	15	819–831
revisited	223:	11	23–40
test sizes in linear models after variable ——	292:	20	291–299
trimmed samples ——	142:	8	193
two-factor with interaction, combinations of F-statistics	685:	14	89–99
two-way —— with interaction	392:	18	273–281
variance components			
sampling distributions of ——: balanced nested design	544:	8	457–468
variance components estimation			
improved algorithm for W-transformation in ——	399:	18	207–211
mixed models	452:	18	11–17
	183:	18	31–38
two-way classification	556:	18	39–46
unbalanced designs	769:	12	207–218
Ancillary statistics			
conditional confidence intervals for double exponential parameters	486:	17	233–235
A-optimality			
optimal design for two noninteractive treatments	115:	19	53–57
APL			
design and analysis of factorial experiments using ——	585:	18	135–150
A-posteriori			
probability method for solving overdetermined sets of equations	796:	8	675–686
Approximation			
comparison of six —— for the negative binomial distribution	50:	8	345–350
(correction)	50:	9	498
(letter)	50:	9	347–348
cumulative t-distribution	505:	8	358–359
normal —— to distribution of Mood's dispersion test	526:	10	497–507
to normal distribution function	135:	9	647–651
to the null distribution of the Shapiro-Wilk W-statistic	779:	10	861–866
Arithmetic moving average (see Moving average)			
ARL (see Average run length)			
Arrhenius re-action rate model			
inference from accelerated life tests using ——	789:	15	289–299
Artifical attributes			
efficient sampling by ——	66:	16	601–611
Assay			
estimating differences in variance when comparing two methods of ——	742:	17	381–382
(letter)	742:	18	124
(letter)	742:	18	124–125
(letter)	742:	19	350–351
ASN (see Average sample number)			
Associated probability			
of a ridge estimate	668:	19	429–439
Atom probe			
and Markov chain statistics of clustering	464:	16	483–493
Attribute control charts			
economic design of ——	152:	17	81–87
Attribute sampling (see Sampling plans, attribute)			
Attribute testing			
combining component and system information	249:	13	271–280
Augmentation of data			
in multiple regression	304:	10	73–81
least squares analysis using ——with side conditions	771:	15	643–646
relationship to ridge regression and variable selection in regression	12:	16	125–127
ridge regression and eigenanalysis of the augmented correlation matrix	386:	17	477–480
to maximize X'X	246:	13	682–688
Augmented designs			
a note on ——	95:	8	184–188
2^{n-1} factorials	456:	8	469–480
Autocorrelation			
calibration of instruments with non-random errors	696:	15	587–599
inverse —— of time series and applications	162:	14	277–298
nonstationary first order auto-regression	883:	16	321–322
(letter)	883:	18	245
quality control for multivariate binomial and Poisson distribution	690:	15	103–112
Automated control			
based on stochastic and dynamic models for a papermaking process	914:	14	481–496
(letter)	914:	14	985–986
(letter)	914:	15	207–208
calibration of instruments with non-random errors	696:	15	587–599
dimension control in centerless grinding	629:	11	115–136
experimental design for linear dynamic systems identification	495:	17	303–308
modeling and analysis of closed-loop systems	684:	19	477–485
present status and future expectations for ——	903:	8	73–90
Autoregressive			
first order —— process	413:	19	313–318

SUBJECT	REF.	VOL.	PAGES
inverse autocorrelations of a time series	162:	14	277–298
Autoregressive model			
Bayes approach to unequal variances in linear models	542:	17	95–102
charts for inference on a second order ——	824:	12	669–685
nonstationary first order ——	883:	16	321–322
(letter)	883:	18	245
Autoregressive moving average model			
charts for inference on a first order ——	825:	16	275–285
optimal sampling interval for discrete process control	563:	18	151–160
(correction)	563:	19	224
(letter)	563:	19	224
(correction)	563:	19	522
Availability			
sequential probability ratio test for ——	755:	14	123–135
test for equality of two ——	659:	10	594–596
(letter)	659:	10	883
Availability ratio			
confidence interval for ——	317:	9	465–471
Average (see Mean and Mean, weighted)			
Average run length			
aproximation for —— in CUSUM control charts	724:	17	65–71
determination of —— and a nomograph for CUSUM charts for a normal mean	310:	13	221–230
examples of errors incurred by falsely assuming normality in CUSUM schemes	490:	9	457–464
for geometric moving average charts	730:	20	85–93
Average sample number (ASN)			
function for curtailed single sampling by attributes	361:	18	307–312
sequential probability ratio test for correlation coefficient	501:	13	833–841
simplified form for —— of a curtailed sampling plan	776:	14	925–929
truncated double sampling plans by attributes	333:	13	811–816
(correction)	333:	14	987
truncated single and double attributes acceptance sampling plans	193:	10	685–692
B			
Backward elimination			
comparing subset regression procedures	70:	20	1–6
Bahadur-Lazarfeld expansion			
density estimation and binary infrared spectra	910:	17	455–462
Balance incomplete block designs (also see Experimental design)			
for 18 varieties	457:	15	641–642
	458:	20	155–158
BAN estimation (see Estimation, BAN)			
Barlow-Scheuer reliability growth model			
a Bayesian viewpoint	887:	20	249–254
estimation scheme	719:	13	199–200
Barnard			
one-sided sequential t-test	827:	12	789–798
Bartlett test			
Bayes approach to unequal variances in linear models	542:	17	95–102
Bayesian			
analysis of multiplicative treatment effects	673:	17	161–166
a posteriori, probability method for resolving overdetermined equations	796:	8	675–686
approach to a shift of mean level in development normal trials	538:	19	503–506
approach to linear models with unequal variances	542:	17	95–102
approximate confidence intervals for nonlinear functions	205:	20	227–230
binomial group-testing with an unknown proportion defective	805:	8	631–656
considerations of heteroscedasticity in fitting kinetic models	709:	19	227–236
correcting heteroscedasticity with power transformation weighting	99:	16	385–389
effect of estimation error on geometric moving average	897:	14	745–755
effect of non-normality on variance component inference	849:	13	635–650
model for optimal test stress	594:	20	179–185
outlier detection			
general linear model	345:	20	187–193
univariate and multivariate ——	343:	15	723–738
relationship of Neyman and —— confidence intervals for hypergeometric parameter	816:	10	199–203
sampling allocation for stratified finite populations	324:	14	599–612
test for change in level	772:	17	61–64
Bayesian estimation (also see Estimation)			
binomial parameter	221:	13	667–673
implicit nonlinear regression	739:	18	161–173
improved parameter ——	104:	12	219–229
insect population size	434:	20	231–234
linear ——	521:	20	281–290
Bayesian life tests (also see Life tests)			
predictive distributions for ——	242:	16	455–460
sequential ——	48:	14	453–468
Bayesian sample plans			
single and double stratified —— for a proportion in a finite population	923:	12	119–130

SUBJECT	REF.	VOL.	PAGES
new prior distribution for attribute ——	153:	16	93–102
restricted double ——	454:	12	647–667
single —— by attributes based on linear cost	334:	13	483–498
single —— by attributes for continuous priors	358:	10	667–683
Baysian reliability (also see Reliability)			
Barlow-Scheuer growth model and ——	887:	20	249–254
confidence limits for redundant systems	813:	10	29–36
	844:	17	89–93
exponential smoothing in —— assessment	325:	13	877–884
inference for exponential distribution	701:	15	249–253
Behrens-Fisher problem			
confidence intervals from Welch's approximate t-solution	209:	17	57–60
power curve comparison of t-test to rank tests	537:	11	299–307
power of Cochran's test	527:	16	545–549
type I error and power for Satterthwaite approximate F-statistic	204:	14	555–569
Bernoulli trials (also see Distributions, discrete)			
dependent —— and Markov chain statistics of clustering	464:	16	483–493
occurrence of n successes with N ——	747:	15	809–818
Bessel functions			
maximum likelihood estimation for the quartic exponential distribution	595:	20	475–484
Best linear unbiased estimation (see Estimation, best linear unbiased)			
Best two out of three			
duplicate measurements in the chemical laboratory	852:	17	53–56
Beta-binomial distribution (see Distributions)			
Beta distribution (see Distributions, continuous)			
Bias			
elimination in calibration	649:	20	201–205
for maximum likelihood estimation of gamma parameters	155:	11	683–690
in calibration	784:	14	547–553
in discretization of continuous random variables	429:	17	333- 339
transformations to improve system reliability confidence intervals	137:	20	467–473
Biased (see Estimation, biased and Ridge regression)			
Bimodality			
maximum likelihood estimation for the quartic exponential distribution	595:	20	475–484
Binary alloys (see Alloys)			
Binary process			
statistical properties of a certain periodic ——	913:	8	247–258
Binomial distribution (see Distributions, discrete)			
Binomial distribution, multivariate (see Distributions, discrete)			
Binomial group-testing			
with unknown proportion of defectives	805:	8	631–656
Biplot			
diagnostic tool for two way tables	117:	20	47–68
(correction)	117:	20	219
Bivariate distribution			
with a discrete and continuous marginal	687:	12	687–691
Bivariate normal distribution (see Distribution, continuous)			
Bivariate range (see Range, bivariate)			
Bivariate rank sum test			
power comparison with Hotelling's T^2	77:	13	191–198
Bivariate samples			
with missing data	644:	9	679–682
	797:	10	867–868
Biweights regression (see Regression, biweights)			
Black box model			
versus a comprehensive model	289:	10	219–229
Block replacement policy			
with general cost structure	855:	17	291–298
BLUE (see Estimation, best linear unbiased)			
Blunders			
probability distributions for aircraft flight path analysis	133:	15	365–378
Bonferroni			
improved —— method for multiple comparisons	860:	18	89–97
table for approximate outlier tests in linear models	562:	17	473–476
Book reviews			
volumes 1–10	——:	11	223–239
volumes 8–20	——:	20	611–624
Bootstrapping			
Bayes linear estimation	521:	20	281–290

SUBJECT	REF.	VOL.	PAGES
Bounds			
sharp upper and lower —— on the burn-in time for specified mean residual life	533:	8	61–71
Box-Behnken design			
which response surface design is best	560:	18	411–417
Box-Draper			
designs compared to D-optimal designs	297:	19	441–444
which response surface design is best	560:	18	411–417
Box-Wilson			
"fold over" theorem, used to generate resolution IV factorial designs	588:	11	431–444
Branch-and-Bound			
solution of a restricted least squares problem	21:	18	447–451
Brownian motion			
approximations to average run length for CUSUM control charts	724:	17	65–71
Brownian motion, first passage times			
test for mean in presence of positive drift	151:	18	189–193
test for zero drift	639:	15	125–132
	773:	16	133–134
test for zero drift and power	693:	18	341–342
Bulk sampling			
estimation of mixing proportions by double sampling	125:	17	119–126
mixtures of multi-sized particles	760:	11	285–298
two-stage subsampling for ranking means	61:	9	355–364
Burn-in			
estimation for the —— procedure	43:	10	51–62
investigation of the —— problem	533:	8	61–71
sequential screening —— procedures	584:	16	229–234
Burr distribution (see Distribution, continuous)			
C			
Calibration			
classical and inverse regression estimators	784:	14	547–553
methods	508:	9	425–439
(letter)	508:	10	429–430
(letter)	508:	10	430–431
(letter)	508:	12	937
(letter)	508:	14	241–242
	509:	11	605–608
(letter)	509:	14	241–242
	593:	12	157–161
elimination of bias in ——	649:	20	201–205
estimation of a linear function for a —— line	71:	11	649–660
(letter)	71:	12	433–434
(letter)	71:	14	241–242
instruments with nonrandom errors	696:	15	587–599
likelihood analysis of the linear —— problem	896:	17	463–471
regression models for ——	902:	11	189–192
(letter)	902:	14	241–242
structural solution to the linear —— problem	477:	13	761–771
Campbell-Paulson			
approximation to negative binomial distribution	50:	8	345–350
(correction)	50:	9	498
(letter)	50:	9	347–348
Capacitors			
discharge of ——, nonstationary first order autoregression	883:	16	321–322
(letter)	883:	18	245
Capture-recapture			
models and estimation in visual scanning	745:	14	813–829
Carbon-14 dating			
nonstationary first order auto-regression	883:	16	321–322
(letter)	883:	18	245
Cardiac pacemakers			
statistical procedures for nuclear powered ——	47:	20	221–226
Cauchy distribution (see Distributions, continuous)			
Celestial			
analysis of stellar X-ray sources	751:	15	341–351
Censored distributions			
effect of two extremes on BLUE for exponential parameters	748:	13	113–125
Censored life tests			
accelerated —— for linear hazard rate distribution	777:	20	457–466
economic choice for —— on exponential data	85:	14	613–618
hazard plotting for ——	660:	14	945–966
optimum accelerated —— for the Weibull and extreme-value distributions	664:	20	171–177
optimum —— for normal and log-normal distributions	663:	18	105–114
planning —— for Weibull hazard rate estimation	202:	12	408–412
Censored samples			
analysis of residuals	657:	15	697–715
best linear unbiased estimation of a regression relationship	662:	15	133–150
comparing a sample with previous accelerated life test results	658:	14	175–185
confidence intervals from ——	363:	8	291–301
	691:	18	221–225
curtailed attribute sampling	698:	10	854–860
determination of optimum order statistics for exponential parameter estimation	741:	9	279–292
estimating a logistic standard			

SUBJECT	REF.	VOL.	PAGES
deviation, also tables	73:	18	313–332
estimation for burn-in procedures	43:	10	51–62
inference from accelerated life tests	790:	13	161–170
linear regression with ——	661:	14	247–276
maximum likelihood estimation for four parameter gamma distribution	375:	9	159–165
O-BLUE estimators for —— in linear regression	369:	16	441–446
power of tests for comparison of exponential distributions	233:	15	183–186
tests of two parameter exponential versus three parameter Weibull	264:	17	353–356
tolerance limits	93:	10	392
Censored samples, extreme-value distribution			
conditional maximum likelihood estimation from singly ——	378:	10	349–359
estimation of parameters	384:	14	63–70
Censored samples, Kolmogorov-Smirnov procedures			
confidence regions for location and scale	552:	20	23–27
modified test	234:	20	29–32
percentage points, asymptotic, for one and two-sample statistic	504:	17	507–510
tests	49:	15	739–757
Censored samples, progressively			
best linear unbiased estimation for Weibull parameters	569:	13	521–533
combining life test data from lognormal and logistic distributions	575:	17	237–245
linear order statistic estimation for Weibull and extreme-value distributions	296:	11	793–803
three parameter estimation for the gamma distribution	842:	14	679–691
lognormal distribution	117:	19	333–340
Weibull distribution	103:	18	99–103
Censored samples, Weibull distribution	172:	17	347–351
inference for ——	79:	14	831–840
maximum likelihood estimation for three parameter	541:	17	247–254
multi-censored for three parameter Weibull	172:	17	347–351
simplified parameter estimators	576:	17	361–368
	262:	17	369–374
	814:	17	375–380
tables for best linear invariant estimates	573:	9	629–645
tables for confidence and tolerance bounds	577:	15	87–101
Censored samples, Weibull and/or extreme-value distribution			
estimation	258:	15	541–549
two parameter	261:	16	49–56
inference	37:	14	693–702
results for one or more independent ——	38:	15	279–288
tolerance bounds	541:	17	247–254
variances and confidence limits for singly censored samples	614:	19	473–476
Centerless-grinding			
automated dimension control	629:	11	115–136
Chain-pooling			
analysis of variance for two-level replication-free factorial experiments	430:	11	725–746
Characteristic roots and vectors			
analysis of multiresponse data	101:	15	33–51
cross-validatory estimation of number of components in factor and principle components models	905:	20	397–405
relationship of coefficient vectors in principle components	441:	15	601–610
Characterizations			
by conditional expectations	365:	14	497–499
(correction)	365:	17	147
distribution of identified minimum of a normal pair determines the distribution of the pair	641:	13	201–202
Character recognition			
statistical aspects	217:	12	231–245
Charlier polynomials (see Gram-Charlier series)			
Chebycheff-Hermite polynomials			
Bayes confidence limits for redundant systems reliability	844:	17	89–93
series estimation of a probability density function	811:	13	409–424
Chemical data (also see Clinical chemistry)			
concentrations, inverse auto-correlations of a time series	162:	14	277–297
curve resolution using postulated reaction	830:	16	353–368
designs for interactions	206:	10	389–391
fitting empirical surfaces to ——	567:	11	411–429
Chemical kinetics			
accounting for heteroscedasticity in fitting models	708:	19	109–115
	709:	19	227–236
analysis of multiresponse data	101:	15	33–51
Chemical laboratory			
duplicate measurements	852:	17	53–56
optimization of quality control in the ——	432:	8	519–534
Chemical synthesis			
economic discrimination between two ——	91:	12	439–455
Chi distribution (see Distributions, continuous)			
Chi-square			
combining observed values	656:	8	709
computation of degrees of freedom for —— goodness-of-fit	148:	9	489–490

SUBJECT	REF.	VOL.	PAGES
Chromatography			
curve resolution using a postulated chemical reaction	830:	16	353–368
self modeling curve resolution	535:	13	617–633
Classification			
adaptive nonparametric ——	695:	11	775–792
estimating the expected probability of misclassification for a linear discriminate function	809:	15	329–339
three probabilities of misclassification: conditional, average and optimal	810:	14	309–316
Class marks			
linear approximator for the —— of grouped frequency distribution	3:	10	793–809
Clinical chemistry			
estimation of correlation of variates having equal coefficients of variation	31:	15	457–462
Closed-loop systems			
analysis of dynamic-stochastic ——	102:	16	391–398
modeling and analysis of —— from operating data	684:	19	477–485
parameter estimation with —— data	103:	18	371–384
Cloud seeding (see Rainfall)			
Cluster analysis			
atom probe and Markov chain statistics	464:	16	483–493
power comparison of two tests for non-random clustering	650:	8	493–517
separating clusters from background	915:	18	55–58
Coalescence			
stochastic ——	582:	10	133–143
Coefficient of determination			
approximate sampling distribution in subset regression	214:	16	317–320
(letter)	214:	17	145
estimation when the number of parameters depends on sample size	904:	12	915–919
Coefficient of variation			
and the noncentral t-distribution	679:	10	445–478
approximations to the percentage points for the ——	438:	12	166–169
as a description of fill weight variation for capsules, tablets and sterile solids	728:	11	161–175
estimating differences in —— when comparing two methods of assay	742:	17	381–382
(letter)	742:	18	124
(letter)	742:	18	124–125
(letter)	742:	19	350–351
estimation of correlation for two variates having same ——	31:	15	457–462
estimation using k samples	926:	15	409–414
random packing of particles	311:	16	301–309
sequential interval estimation of gamma shape parameter	670:	15	563–569
test and power of zero drift on first passage times in Browian motion	693:	18	341–342
Coherence			
estimation in time series	165:	17	167–172
Combining			
independent estimators	549:	12	162–165
observed chi-square values	656:	8	709
Comer, John P.			
memoriam	793:	11	630
Communication			
application of extreme-value theory to error free ——	340:	8	363–366
satellite replenishment policy	215:	8	399–409
Comparison of proportions			
sample sizes for ——	129:	20	437–440
Compartmental model			
fitting systems of linear differential equations using computer generated exact derivatives	450:	18	385–399
(letter)	450:	19	348
simultaneous nonlinear estimation	57:	8	319–326
(correction)	57:	9	353
Spearman simultaneous estimation	58:	11	551–560
Component information			
combining —— and system information	249:	13	271–280
confidence intervals for system reliability based on combining ——	578:	16	335–347
Components of variance (see Variance components)			
Composite design			
optimum ——	559:	16	561–567
slope-rotatable central ——	351:	20	413–417
which response surface design is best	560:	18	411–417
Composited samples			
subsampling a mixture of material	124:	14	663–668
three stage nested designs with ——	252:	16	409–417
Compound exponential failure (see Exponential failure, compound)			
Comprehensive model			
or a black box model	289:	10	219–229
Compressed limit sampling plans (see Sampling plans, compressed limit)			
Compressed samples (see Samples, compressed)			
Computation			
all possible regressions with less ——	293:	13	403–408
efficient —— of all possible regressions	757:	10	769–779
inverse Yates algorithm	433:	8	177–183

SUBJECT	REF.	VOL.	PAGES
of percentage points of a statistic	806:	12	373–382
of residual sums of squares for all possible regressions	632:	14	317–326
solution of equations involving centrosymmetric matrices	15:	15	405–407
Computational methods			
approximating tabular F values	466:	15	379–384
(letter)	466:	15	947
checking tolerance of matrix inversion	288:	19	513–514
choice of sum or sum-of-product algorithms	920:	13	657–665
estimation in mixed analysis of variance using the W-Transformation	398:	15	819–831
improved Marquardt procedure for nonlinear regression	792:	13	63–74
residual sums of squares for all possible regressions	294:	16	499–511
variable selection in discriminate analysis	600:	17	103–109
Computer aids			
algorithm for deriving optimal block designs	473:	18	451–458
construction of D-optimal first order designs	624:	16	203–210
	625:	16	211–220
experimental design when run order is important	472:	18	249–259
in experimental design	493:	11	137–148
interactive computer graphics	40:	12	17–31
operators for analysis of variance computations	287:	11	511–526
self modeling			
curve resolution	535:	13	617–633
nonlinear regression	536:	14	513–532
Computer control (see Automated control)			
Computer program			
approximating the noncentral F-distribution	633:	18	351–358
estimating procedures for the burn-in process	43:	10	51–62
evaluation of multivariate normal integral	622:	14	881–889
normal and inverse normal distribution function	623:	11	817–822
percentage points of inverse Gaussian distribution	827:	11	591–604
random permutations of an array of numbers	230:	8	695–699
(correction)	230:	11	627
Computers			
as instruments for data analysis	634:	12	259–293
in statistical research: simulation and computer aided mathematics	143:	12	1–15
Computer solution			
fitting systems of linear differential equations	450:	18	385–399
(letter)	450:	19	348
of the discrete maximum entropy problem	323:	14	891–897
Computing, interactive			
design and analysis of factorial experiments using APL	585:	18	135–150
Conditional expectations			
used for characterization	365:	14	497–499
(correction)	365:	17	147
Confidence band			
in multivariate polynomial regression	301:	20	141–149
Confidence bound			
approximate optimum —— for systems reliability based on component test data	578:	16	335–347
Bayes —— for redundant systems reliability	844:	17	89–93
distribution free —— for $Pr\{Y < X\}$	861:	14	577–581
exact —— for reliability of a series system	749:	13	535–546
for reliability of Gumbel distribution	400:	12	700–701
goodness-of-fit for two versus three parameter Weibull; —— for threshold	575:	17	237–245
on parameters of the Weibull process	282:	18	115–117
tables for obtaining Weibull ——	577:	15	87–101
uniform —— for quadratic regression	859:	15	611–624
Confidence interval			
and the noncentral t-distribution	679:	10	445–478
applications to claims of product superiority	353:	19	131–134
approximate —— for nonlinear functions	205:	20	227–230
Bayesian —— for redundant systems reliability	813:	10	29–36
by maximum likelihood for singly censored Weibull data	617:	19	473–476
comparison of some approximate —— exponential scale parameter	478:	15	483–487
comparison of two —— for the ratio of two Poisson parameters	445:	12	383–387
comparison of two methods of obtaining approximate —— for systems reliability	638:	10	37–49
comparison of waiting time versus counting technique for a —— on a Poisson parameter	178:	13	699–703
conditional —— for double exponential parameters	486:	17	233–235
correct use of the sample mean absolute deviations in normal ——	510:	8	663–674
equality of two availabilities	147:	15	889–896
estimation for the double exponential distribution	39:	15	875–887
(letter)	39:	16	641–642
(letter)	39:	16	642
estimation of safe life with Weibull life distribution	530:	15	857–865
exact —— for Weibull parameters using order statistics	571:	12	345–361
for lognormal hazard	474:	13	885–888
for lognormal means	523:	14	145–158

SUBJECT	REF.	VOL.	PAGES
for minimum fatigue life	756:	16	113–123
for regression models	354:	14	203–214
for reliability of Weibull distribution	841:	12	363–371
for standard deviation using a single normal observation	734:	8	367–368
for the availability ratio	317:	9	465–471
for the exponential scale parameter	480:	14	371–383
for Weibull parameters	841:	11	445–460
for the Weibull and extreme-value distributions	528:	20	355–364
for the exponential scale parameter, using order statistics	481:	16	251–254
from censored samples	363:	8	291–301
from Welch's approximate t-statistic	209:	17	57–60
graphical —— for treatment means	278:	17	181–189
graphical version of Tukey's —— for slippage	746:	10	193–194
joint —— for ranked observations	380:	8	368–370
multiple comparisons for means, four procedures	860:	18	89–97
on reliability of two parameter exponential	265:	20	37–39
quantile estimators for Weibull and extreme-value distributions	574:	19	87–93
relationship of Neyman and Bayes —— for a hypergeometric parameter	816:	10	199–203
shortest —— for Weibull shape parameter	26:	19	201–203
simplified —— for Weibull parameters	576:	17	361–368
	262:	17	369–374
	814:	17	375–380
simultaneous —— for instrument imprecision	372:	17	299–302
transformations to improve —— for system reliability	137:	20	467–473
using censored data	691:	18	221–225
Confidence region			
classical —— for ridge regressions	668:	19	429–439
evaluation of regression coefficients using α-acceptability	601:	20	131–141
for location and scale based on Kolmogorov-Smirnov statistic	552:	20	23–27
for lognormal hazard function	640:	11	387–388
jackknife construction of —— in nonlinear regression	238:	20	123–129
least squares nonlinear model estimation	346:	15	209–218
rectangular ——	858:	14	855–879
simultaneous —— in the general linear model	834:	18	85–87
used to detect influential observations in linear regression	182:	19	15–18
(letter)	182:	19	348–349
(letter)	182:	19	349
Connected block designs			
algorithm for deriving optimal ——	473:	18	451–458
Consonance region			
parameter estimation from goodness-of-fit tests	250:	18	1–9
Constant coefficients			
case for least squares nonlinear estimation	346:	15	209–218
Constrained maximization (see Maximization, constrained)			
Constrained mixture spaces			
experimental design for quadratic models in ——	798:	17	149–159
(correction)	798:	18	246
Constrained randomization			
2^n factorials	848:	12	471–486
Consulting in Statistics (see Statistical consulting)			
Consumer			
determination of single sampling attribute plans with given producer and —— risk	360:	9	401–415
risk in non-normal populations	787:	8	335–343
Consumerism			
product superiority, prediction intervals for the difference of two future means	353:	19	131–134
Contaminated distributions (see Distributions)			
Contingency tables			
analysis of multidimensional ——: stepwise procedures	315:	13	33–61
exact tests of significance for 2×3 ——	393:	11	393–395
hypothesis of "no interaction" in multidimensional ——	75:	10	107–123
nonrandomized unconditional test for comparing two proportions	606:	19	145–157
note on graphical analysis of multidimensional ——	192:	9	481–488
ordering for significance tests	300:	13	910–911
use to determine if two test procedures are the same	543:	12	417–418
weighted least squares analysis of Ries-Smith data	470:	13	438–447
Continuity correction			
justification of ——	367:	16	631–632
Continuous distributions (see Distributions, continuous)			
Continuous production			
screening in ——	761:	14	653–661
Continuous sampling plans (see Sampling plans, continuous)			
Contrasts			
selecting —— among parameters in Scheffé's mixture model	688:	20	273–279
sequences of fractional factorial designs from defining ——	1:	11	477–509
Control, automated (see Automated control)			

SUBJECT	REF.	VOL.	PAGES
Control chart			
average run length of geometric moving average ——	730:	20	85–93
comparison of several procedures	729:	8	411–430
constants for largest and smallest for normal samples using the Burr distribution	29:	15	931–933
detection of failure rate increases	554:	15	167–175
economic design of attribute ——	152:	17	81–87
economic design of p-charts	237:	20	235–243
occurance of n successes in N Bernoulli trials	749:	15	809–818
optimization of quality control in the chemical laboratory	432:	8	519–534
Control chart, attributes (see Control chart)			
Control chart, CUSUM			
and the Weibull distribution	467:	8	481–491
approximations for average run length	724:	17	65–71
comparison of several procedures	729:	8	411–430
contour nomogram for —— to control normal mean	310:	13	221–230
economic design of ——	836:	10	479–488
effect of serial correlaton on CUSUM test	34:	17	73–80
modified V-mask control scheme	558:	15	833–847
Convex programming			
restricted least squares regression and ——	580:	11	763–773
solution to maximum entropy problem	323:	14	891–897
Convolutions			
use of discrete ——	35:	16	473–475
Core sampling			
subsampling a mixture of material	124:	14	663–668
Correct classification (also see Misclassification)			
expected values for probability of —— in discriminant analysis	239:	13	345–353
Correlation			
distribution-free test for related —— coefficients	907:	19	507–509
(correction)	907:	20	219
estimation of —— between variates having equal coefficients of variation	31:	15	457–462
for truncated bivariate Poisson distribution	366:	14	37–45
in a bivariate distribution having different marginals	687:	12	687–691
multiple —— coefficient for multiple classification data	315:	13	33–61
nonparametric sequential tests for independence	154:	15	625–631
probability plot —— coefficient test for normality	281:	17	111–117
of $y - \hat{y}$ and y in regression analysis	443:	9	339–340
sequential probability ratio test for —— coefficient	501:	13	833–841
Correlation, intraclass			
maximum likelihood estimation in ——	371:	11	833–834
Correlation, multiple			
comparing regressions when predictor values are missing	738:	18	201–205
Cost			
age replacement with adjustment, depreciation and interest ——	160:	16	235–239
discounting for continuous maintenance ——	714:	18	459–465
block replacement policies with general —— structure	855:	17	291–298
dual purpose —— based quality control system	765:	15	151–166
economial choice for exponential life testing	85:	14	613–618
factors in experimental design	472:	18	249–259
minimum —— model for spare parts inventory control	899:	9	661–665
optimum age replacement policies for increasing —— factor	758:	13	139–144
response surface optimization when factors are subject to cost	393:	15	113–123
run orders requiring minimum number of factor level changes	213:	16	31–37
sample sizes for proportion comparisons	129:	20	437–440
single sampling attribute plan on linear —— model and a prior distribution	334:	13	483–498
Covariance			
of sines and cosines of random arguments	146:	12	693–694
Covariance analysis			
examination of assumptions of —— using residuals	799:	13	430–437
nearly optimal allocation of experimental units using a covariate	381:	16	589–599
Covariance matrix			
power of tests for equality	321:	16	27–30
Coverage of targets			
survey of problems associated with ——	251:	11	561–589
Coverage problems			
survey of —— for point and area targets	251:	11	561–589
Convex			
restrictions in least squares	873:	16	135–136
Cox			
designs for —— mixture polynomial	187:	17	25–35
C_p statistic			
and fitting equations to data	909:	15	677–695
for variable selection in regression	492:	13	899–900
(correction)	492:	15	657
	566:	15	661–675

SUBJECT	REF.	VOL.	PAGES
selection of best subset in regression analysis	418:	9	531–540
variable selection in the general linear model	395:	16	261–273

tables for ——	858:	14	855–879
uniform confidence bands for quadratic model	859:	15	611–624
t-distribution, Winsorized			
approximate behaviour of ——	216:	10	83–98
uniform			
best test for exponential versus —— using incomplete data	665:	18	237–238
characterization by conditional expectations	365:	14	497–499
(correction)	365:	17	147
distribution of a variate based on ranges from ——	604:	18	343–349
Wald			
normalized logarithmic transformation for inverse Gaussian distribution	895:	20	207–208
Weibull			
age replacement problem	307:	9	83–91
best linear invariant estimation under progressive censoring	569:	13	521–523
characterization by conditional expectations	365:	14	497–499
(correction)	365:	17	147
confidence band for minimum fatigue life	756:	16	113–123
confidence bounds for reliability (tables)	461:	8	135–175
confidence intervals	528:	20	355–364
cumulative sum control charts	467:	8	481–491
estimation by linear and nonlinear regression	69:	16	617–619
estimation for complete and censored samples	258:	15	541–549
estimation from censored data	37:	14	693–702
	79:	14	831–840
estimation of hazard rate using censored data	202:	12	408–412
estimate of safe life	530:	15	857–865
estimators and exact confidence bounds for parameters based on ordered observations	571:	12	345–361
experimental design for sensitivity testing	597:	19	405–413
goodness-of-fit test for two versus three parameter ——	575:	17	237–245
inferences on the parameters	840:	11	445–460
life testing	273:	19	69–75
linear estimation of parameters	194:	13	171–182
	195:	13	428–429
linear order statistic estimation for progressively censored ——	842:	14	679–691
maximum likelihood estimation for three parameter —— based on censored samples	541:	17	247–254
multi-censored sampling from three parameter ——	172:	17	347–351
optimal accelerated censored life tests	664:	20	171–177
over-stress life tests	570:	14	437–451
parameter estimation	18:	9	621–627
parameter estimation for compound ——	270:	12	399–407
percentile estimation	231:	9	119–129
permissible estimation for the location parameter	232:	9	293–307
point and interval estimation for the two parameter	572:	10	231–256
	261:	16	49–56
procedures for comparing two ——	754:	18	231–235
proportional sampling in life length studies	86:	9	205–218
quantile estimators for confidence, prediction and tolerance intervals	574:	19	87–93
reliability estimation and robustness	352:	13	547–557
results for independent censored samples	38:	15	279–288
shortest confidence intervals for shape parameter	26:	19	201–203
skewness and kurtosis as a function of shape parameter	737:	15	927–930
simplified parameter estimation	576:	17	361–368
	262:	17	369–374
	814:	17	375–380
simplified statistical procedures	263:	19	323–331
simultaneous prediction intervals for reliability analysis	405:	18	227–229
tables for best linear invariant parameter estimators	573:	9	629–645
tables for confidence and tolerance bounds	577:	15	87–101
test for —— versus lognormal distribution	235:	15	923–926
test of two parameter exponential versus three parameter ——	264:	17	353–356
tolerance bounds	529:	17	255–261
two sample tests	839:	11	805–815
upper bounds on power for invariant tests of exponential with —— alternatives	20:	17	357–360
variances and confidence limits from singly censored data	617:	19	473–476
weighted least squares estimates for censored samples	893:	11	373–386

centering and scaling in ridge regression	128:	19	35–36
effect of estimation error on geometric moving average	897:	14	745–755
trending time series with relative growth rate models	548:	18	261–272
Fourier methods			
discrete —— for decomposition of multicomponent exponential decays by spectral analysis	795:	18	467–482

SUBJECT	REF.	VOL.	PAGES
in the study of time series variance fluctuations	667:	11	103–113
quadratic windowing for segment averaging of power spectrum	921:	20	195–200
time series approach to numerical differentiation	14:	16	69–75
Fourier transform, fast			
inverse autocorrelations of a time series	162:	14	277–298
nonlinear predictors	654:	15	219–231
Forward selection			
comparing subset regression procedures	70:	20	1–6
Fractional factorial designs (see Factorial designs, fractional)			
Fractional moments (see Moments, fractional)			
Frequency distribution (see various headings under Distributions)			
Fraction defective (see Percentage defective)			
Frequency range			
extending the —— of spectrum estimates using two data recorders	651:	12	877–890
Frequency response			
estimation in time series	165:	17	167–172
Fisher-Behrens problem (see Behrens-Fisher problem)			
Fisher-Cornish			
approximation to chi-square quantiles used for normal tolerance intervals	299:	8	115–122
Fisher's exact test			
nonrandomized test for comparing 2×2 contingency table proportions	606:	19	145–157
Fitting empirical surfaces			
to physical and chemical data	567:	11	411–429
Fitting equations to data (also see Data analysis, curve fitting)			
use of individual effects and residuals in ——	909:	15	677–695
variable selection for ——	316:	8	27–51
Fitting power series (also see Polynomials and Regression, polynomial)			
polynomials	56:	16	147–192
Fitting response surfaces (see Response surfaces)			
Fitting surfaces (see Data analysis, curve fitting)			
Flame failure control system			
alarm level, Markov processes with discrete time parameters	2:	12	851–866
Flaw length			
distribution of maximum —— after inspection	540:	16	577–583
Flight path analysis			
a class of probability distributions for aircraft ——	133:	15	365–378
Flowgraph analysis			
GERT, a technique for analyzing reliability problems	894:	12	33–48
Foldover designs			
nonorthogonal designs of even resolution	877:	10	291–299
F-statistic			
a combination of ——	685:	14	89–99
approximate ——	880:	10	597–604
using Satterthwaite degrees of freedom	204:	14	555–569
classical —— tests for ridge regression	668:	19	429–439
comparison of some approximate ——	203:	15	779–789
selection of variables in discriminate analysis	349:	19	487–493
sequentially testing the degree of a polynomial	422:	10	757–767
small sample behaviour of four statistics for testing equality of means	127:	16	129–132
to test main effects and interactions in higher-way random effects models	373:	16	17–25
F-statistic, pseudo			
use in stepwise regression	702:	14	327–340
F-test (see F-statistic)

Gamma distribution (see Distributions, continuous)			
Gamma distribution, generalized (see Distributions, continuous)			
Gamma distribution, inverted (see Distributions, continuous)			
Gamma distribution, multivariate (see Distributions, continuous)			
Gamma distribution, truncated (see Distributions, continuous)			
Gap analysis			
graphical techniques for data analysis	277:	16	287–299
Gaussian distribution (see Normal under Distributions, continuous)			
Gaussian process			
sampling rates and appearance of a stationary ——	851:	8	91–106
spectral estimation after hard clipping of a ——	414:	9	391–400
statistical control of a ——	837:	9	29–41
Gauss-Newton			
derivative-free algorithm for nonlinear least squares	713:	20	7–14

SUBJECT	REF.	VOL.	PAGES
fitting systems of linear differential equations	450:	18	385–399
implicit nonlinear regression	739:	18	161–173
iterative algorithm for one-dimensional search procedures in nonlinear regression	284:	11	265–284
stepwise regression applied to nonlinear regression	457:	10	63–72
Generalized inverses (see Matrix, generalized inverse)			
Geometric distribution (see Negative binomial under Distributions, discrete)			
Geometric interpretation			
design of experiments for subsets of parameters	408:	16	425–434
Geometric moving average (see Moving average)			
Geometric programming			
maximum likelihood estimation for the multinomial distribution	10:	16	585–587
General linear model			
average estimated variance criterion for variable selection in ——	395:	16	261–273
Bayes approach to outliers in the ——	345:	20	187–193
best linear unbiased estimation for multivariate stationary processes	786:	10	523–534
Jackknifing in unbalanced situations	416:	19	285–292
multiple classification analysis for arbitrary experimental arrangements	114:	10	13–27
rounding errors in the independent variables	829:	14	215–218
simultaneous confidence ellipsoids in the ——	834:	18	85–87
Generalized gamma distribution (see Distributions, continuous)			
Generalized variance (see Variance, generalized)			
GERT			
analysis of the Dodge-Romig sampling inspection plan	488:	19	249–257
technique for analyzing reliability problems	894:	12	33–48
Gibbs type phenomenon			
in failure rates of parallel systems	130:	13	692–695
(letter)	130:	14	507
(letter)	130:	14	507–508
Goodness-of-fit			
approximate analysis of variance test for normality	888:	17	133–134
coefficient to measure ——	884:	8	327–334
(correction)	884:	9	195
computation of degrees of freedom for chi-square ——	148:	9	489–490
in visual scanning experiments	144:	15	67–78
is the regression equation adequate?	826:	19	213–216
Kolmogorov-Smirnov statistic			
for censored data (tables)	49:	15	739–757
for discrete and grouped data	697:	19	205–210
modified for truncated or censored samples	234:	20	29–32
parameter estimation based on ——	250:	18	1–9
probability plot correlation test for normality	281:	17	111–117
test for two versus three parameter Weibull distribution	575:	17	237–245
tests based on nonlinearity in probability plots	516:	19	293–306
tests for gamma and exponential distributions	196:	14	791–801
Wilk-Shapiro test for exponential with known origin	819:	20	33–36
Gradients			
use of —— to interpret mixture response surfaces	189:	17	409–430
Gradient search (see Search techniques)			
Graduating polynomial			
response surface design for factors at two and three levels and at two and four levels	229:	10	177–192
Grain bulk			
Bayes approach to insect population size	434:	20	231–234
Gram-Charlier series			
approximation to negative binomial	50:	8	345–350
(correction)	50:	9	498
(letter)	50:	9	347–348
estimation for truncated bivariate Poisson distribution	366:	14	37–45
in nonparametric density estimation	882:	14	533–546
of type A in series estimation of a probability density function	811:	13	409–424
Graphical methods			
allocation of total sample size in stratified sampling using ——	141:	13	817–831
biplot as a diagnostic tool for two way tables	117:	20	47–68
(correction)	117:	20	219
charts for second order moving average and mixed first order time series models	825:	16	275–285
covariance analysis using residuals	799:	13	430–437
C_p -plots in variable selection for regression	566:	15	661–675
design and analysis of factorial experiments using APL	120:	18	135–150
enhancing scatterplots for moving averages	164:	17	447–454
evaluation of sample sizes for the multinomial distribution using	17:	16	469–471
goodness-of-fit tests based on non-linearity in probability plots	516:	19	293–306
hazard plotting for censored failure data	660:	14	945–966
in data analysis	277:	16	287–299

SUBJECT	REF.	VOL.	PAGES
individual and residual effects in fitting equations to data	909:	15	677–695
interactive computer graphics	40:	12	17–31
modifications of and revised critical points for the half normal plots	925:	17	189–200
multidimensional contingency tables ——	192:	9	481–488
multiple comparisons of frequencies using ——	723:	11	321–329
new test for normality and transformations to normality based on ——	835:	14	735–744
partial residual plots in regression	524:	14	781–790
response surface techniques for dual response systems	636:	15	301–317
ridge trace for ridge regression	424:	12	69–82
(correction)	424:	12	723
studentized range graph paper for means comparisons	278:	17	181–188
two diagnostic displays for robust regression	210:	19	1–13
Tukey's confidence interval for slippage using ——	746:	10	193–194
Graph theory			
implicit enumeration for proper cut generation	67:	12	775–788
Gray codes			
run orders requiring a minimum number of factor level changes	213:	16	31–37
Grouped data			
approximate maximum likelihood estimation for grouped data	832:	9	599–606
estimation from —— for compound exponential distribution	89:	15	271–277
goodness-of-fit using Kolmogorov-Smirnov statistic on ——	697:	19	205–210
Grouped divisible designs (see Experimental design)			
Grouped frequency distribution			
linear approximation for —— class marks, including the unequal interval case	3:	10	793–809
Grouping			
optimal acceptance test plans with ——	577:	17	315–320
Group sampling			
sequential ——	253:	14	167–174
Group testing			
binomial —— with unknown proportion defective	805:	8	631–656
exact solution to the two-stage —— problem	743:	20	497–500
extension of Dorfman procedure	731:	14	113–122
for leaks in sealed radioactive sources	689:	18	59–66
Growth curves			
analysis of ——	800:	14	47–62
Growth rate models			
forecasting trending time series with relative ——	548:	18	261–272
Grubb's statistics			
estimators of instrument precision with more than two instruments	448:	18	127–133
for detection of outliers	853:	14	583–597
Gumbel distribution (see Distributions, continuous)			
Gust-load problem			
estimation for the extreme-value distribution	384:	14	63–70
H			
Hadamard matrix			
note on orthogonal main effects	211:	19	511–512
Half-normal plots			
modification of and revision of critial values	925:	17	189–200
	924:	17	201–211
Hard clipping			
spectral estimation after —— of a Gaussian process	414:	9	391–400
Harmonic analysis			
quadratic windowing for power spectrum segment averaging	921:	20	195–200
Harmonic components of variance			
and analysis of variance	442:	11	75–90
Hazard function			
confidence region for lognormal ——	640:	11	387–388
proportional ——	643:	12	413–416
Hazard plotting			
analysis of residuals from censored data	657:	15	697–715
for censored failure data	660:	14	945–966
Hazard rate			
accelerated life testing for a class of linear —— distributions	777:	20	457–466
confidence interval for lognormal ——	474:	13	885–888
estimation for Weibull distribution using censored life tests	202:	12	408–412
Health physics			
leak-testing of sealed radioactive sources	689:	18	59–66
Heavy tailed distributions			
properties and tests	131:	16	61–68
Hermite polynomials			
in series estimation of probability density functions	811:	13	409–424
Heteroscedasticity (also see Homogeneity)			
accounting for —— in experimental design	708:	19	109–115

SUBJECT	REF.	VOL.	PAGES
Bayes approach to —— in linear models	542:	17	95–102
considerations of —— in kinetic models	709:	19	227–236
correcting —— with power transformation weighting	99:	16	385–389
design and analysis of factorial experiments using APL	585:	18	135–150
exact analysis of variance with ——	83:	20	419–430
small sample behaviour of four statistics for testing equality of means	127:	16	129–132
Highway traffic			
stochastic model of microscale air pollution from ——	583:	15	353–363

Hyperbinomial distribution (see Distributions, discrete)			
Hypergeometric distribution (see Distributions, discrete)			
Hypertrinomial distribution (see Distributions, discrete)			
Hypothesis tests			
best test for exponential versus uniform using incomplete data	665:	18	237–238
combinations of F-statistics	685:	14	89–99
double sample tests for exponential mean	132:	15	187–190
exact tests for 2×3 contingency tables	389:	11	393–395
for comparing two Weibull populations	754:	18	231–235
for equality of two availabilities	659:	10	594–596
(letter)	659:	10	883
	147:	15	889–896
for half-rectified truncated distributions	725:	11	47–59
for heavy tailed distributions	131:	16	61–68
for mixture models	591:	16	533–537
for two exponential scale parameters using order statistics	481:	16	251–254
for zero drift based on first passage times in Browian motion	639:	15	125–132
	773:	16	133–134
	693:	18	341–342
with positive drift	151:	18	189–193
goodness-of-fit for gamma and exponential distribution	196:	14	791–801
joint assessment of normality of several independent samples	900:	10	825–839
likelihood ratio —— discrimination between two unknown models	236:	15	19–31
one-sided tests for change in level	722:	17	61–64
optimum unbiased inference for the gamma distribution	259:	20	485–489
power of			
Cochran's test for Behrens-Fisher problem	527:	16	545–549
tests for comparisons of exponential distributions based on censored data	233:	15	183–186
tests for equality of covariance matrices	321:	16	27–30
tests for equality of two exponential distributions	886:	15	177–182
probability plot correlation —— for normality	281:	17	111–117
sample sizes for comparisons of proportions	129:	20	437–440
short-cut rule for one-sided tests on qualitative data	675:	11	197–200
squared rank test for cross-over designs	621:	16	13–16
stepwise —— for multiplicative interaction components	917:	20	79–84
testing the degree of a polynomial	422:	10	757–767
two parameter exponential versus three parameter Weibull	264:	17	353–356
two- sample —— for Weibull distributions	839:	11	805–815
unconditional —— for comparing two proportions	606:	19	145–157
uniformly most powerful unbiased —— for gamma scale parameter with nuisance shape parameter	266:	19	77–81
upper bounds for power of invariant tests of exponential versus Weibull distribution	20:	17	357–360
Wilk-Shapiro test for exponential with known origin	819:	20	33–35
Hypothesis tests, sequential			
alternative measure of efficiency	437:	15	571–574
based on ranks: modified two sample procedures	116:	8	615–623
Bayesian —— for life times	48:	14	453–468
chart for —— on observed lognormal means against a standard	453:	10	605–612
comparison of two model discrimination criteria	618:	12	457–470
detection of failure rate increases	554:	15	167–175

Latin squares (also see Experimental design)			
partially balanced —— type designs	159:	9	229–244
set of three mutually orthogonal —— of order 15	391:	13	696–698
Learning process			
confidence bounds on the parameters of a Weibull process	282:	18	115–117
model for processes with tool wear	791:	10	379–387
Least squares (also see Regression and Ridge regression)			
analysis of experimental design models by augmenting the data with side conditions	771:	15	643–646
average estimated variance criterion for variable selection in general linear model	395:	16	261–273
Bayes linear estimation	521:	20	281–290
biased estimation for linear models	598:	15	497–508
branch-and-bound solution of restricted —— problem	21:	18	447–451
compared to latent root regression	341:	18	75–83
derivative-free algorithm for nonlinear ——	713:	20	7–14

SUBJECT	REF.	VOL.	PAGES
efficiency of —— estimators from trimmed and Winsorized samples	368:	19	265–273
estimation of a symmetric matrix	525:	8	360–362
estimation for nonlinear models	44:	14	757–766
	346:	15	209–218
implicit models	123:	15	233–247
fitting equations to data	909:	15	677–695
fitting of power series	56:	16	147–192
implicit nonlinear regression	739:	18	161–173
jackknife constructed confidence regions in nonlinear regression	238:	20	129
latent root regression	881:	16	513–522
likelihood distributions for function estimation when both variables have errors	166:	9	261–269
nonlinear —— parameter estimation with cumulative errors	63:	16	85–92
nonstationary first order autoregression	883:	16	321–322
restricted —— problems	873:	16	135–136
regression and convex quadratic programming	580:	11	763–773
robust multiple regression	16:	16	523–531
spline functions in data analysis	906:	16	1–11
use and abuse of regression	97:	8	625–629
Least squares, weighted			
accounting for heteroscedasticity	708:	19	109–115
in kinetic models	709:	19	227–236
correcting heteroscedasticity using power transformations	99:	16	385–389
estimates from censored Weibull sample	893:	11	373–386
fitting partially linear models by ——	382:	15	509–515
versus unweighted using Scheffe's mixture model	188:	19	237–247
Lehmann alternatives			
tables for Mann-Whitney-Wilcoxon U-statistic under ——	783:	9	666–677
Licensing			
statistical procedures for nuclear powered cardiac pacemakers	47:	20	221–226
Life model			
inverse Gaussian distribution as a ——	150:	19	461–468
Life testing			
analysis for the linear failure rate —— distribution	36:	16	551–559
best linear invariant estimation for progressively censored Weibull distribution	569:	13	521–533
combining component with system information	249:	13	271–280
confidence bounds for system reliability based on component test data	578:	16	335–347
direct method in sequential ——, with bibliography	22:	18	301–306
distributional shape in ——	273:	19	69–75
distribution-free —— sampling plans	42:	8	591–613
early failure and ——	171:	8	539–545
economic choice of —— procedures for exponential data	85:	14	613–618
estimation for compound exponential failure models	88:	12	891–900
expected life with an outlier	476:	13	755–760
grouped data for the compound exponential distribution	89:	15	271–277
estimation problem	491:	13	289–301
multi-censored sampling for three parameter Weibull population	172:	17	347–351
number of failures to control risks of erroneous judgements in exponential ——	327:	15	191–193
on independent component, s-space systems	76:	15	529–539
over-stress —— for Weibull failure times	570:	14	437–451
power of precedence ——	782:	9	154–158
prediction for samples from an exponential distribution	532:	13	725–730
prediction intervals based on partial observations in ——	403:	10	850–853
for the two parameter exponential distribution	531:	19	459–472
progressively censored sampling from the three parameter gamma distribution	177:	19	333–340
lognormal distribution	103:	18	99–103
proportional sampling in ——	86:	9	205–218
randomized load sequences based on a Markov process	394:	8	107–114
sample size calculations in exponential ——	674:	17	229–231
(letter)	674:	17	518
sequential designs for replacements in exponential ——	440:	19	455–459
simultaneous prediction intervals for failure times	404:	13	397–402
means of future exponential samples	355:	17	341–345
tables of expected values of multinomial ratios and reciprocals	90:	12	901–908
under dependent competing causes of failure	628:	16	39–47
Life tests, accelerated			
analysis of residuals from censored data	657:	15	697–715
asymptotically optimal over-stress —— to estimate survival probability	615:	19	381–404
Bayes model for single unit optimal test stress	594:	20	179–185
best linear unbiased estimation of a regression relationship using censored data	662.	15	133–150
comparing a sample with previous —— results	658:	14	175–185
comparison of —— to estimate survival probabilities	616:	20	245–247
estimation from ——	45:	13	145–159
for a class of linear hazard rate distributions	777:	20	457–466
inference from ——, using Arrhenius type reparameterizations	789:	15	289–299
censored samples	790:	13	161–170
linear regression on censored data	661:	14	247–276

SUBJECT	REF.	VOL.	PAGES
optimum censored —— for normal and lognormal distributions	663:	18	105–114
Weibull distribution and extreme-value distributions	664:	20	171–177
Life tests, Bayesian			
confidence limits for reliability of redundant systems	884:	17	89–93
predictive distribution in ——	242:	16	455–460
sequential ——	48:	14	453–468
Life tests, sequential			
for exponential distribution with changing parameter	25:	8	217–227
Likelihood analysis			
for linear calibration problem	896:	17	463–471
Likelihood ratio tests (see Hypothesis tests)			
Linear discriminate function (see Discriminate analysis)			
Linear estimation (see Estimation, linear)			
Linear graph (see Graph theory)			
Linear model (also see General linear model, least squares and Regression)			
approximate test for outliers in the ——	562:	17	473–476
minimum variance quadratic unbiased variance component estimation	828:	20	265–272
test sizes in a —— for transformed variables	292:	20	291–299
Linear programming			
economic screening of continuously manufactured product	483:	14	653–661
regression and minimum sum of relative errors	648:	19	185–190
Load sequences			
development of randomized —— based on Markov processes	394:	8	107–114
Local analysis			
spline functions in data analysis	906:	16	1–11
Local independence			
models and estimation in visual scanning	745:	14	813–829
Location problem (also see Behren-Fisher problem)			
Monte Carlo study of two sample means tests	652:	10	509–522
one-sided Tukey-Duckworth test	889:	13	901–903
power curve comparison of t-test to two rank tests	537:	11	299–307
power of tests for comparison of exponential distributions	233:	15	183–186
two-stage two-sample median test	908:	19	495–501

SUBJECT	REF.	VOL.	PAGES
Log-gamma distribution (see Distributions, continuous)			
Logistic distribution (see Distributions, continuous)			
Logistic model			
asymptotically optimum over-stress tests for survival probabilities	615:	19	381–404
comparison of accelerated life tests to estimate survival probabilities	616:	20	245–247
in visual scanning experiments	745:	14	813–829
two stage estimation for the ——	744:	15	67–78
Logit			
new test for normality and transformations to normality	835:	14	735–744
stepwise —— analysis	315:	13	33–61
Log-linear model for variances			
Bayes approach to unequal variances in the linear model	542:	17	95–102
Log-linear transformation			
in life testing	273:	19	69–75
shortest prediction intervals for —— regression	768:	13	889–894
Lognormal distribution (see Distributions, continuous)			
Log-Weibull distribution (see Distributions, continuous)			
Lot average			
double sampling for ——	255:	16	435–439
Lot size			
determination with instantaneous emergency deliveries	113:	14	931–934
M			
Machine tool equipment			
diamond pin location	630:	9	131–148
Maintainability			
application of direct method in sequential analysis	22:	18	301–306
Maintenance cost			
age replacement with discounting for a continuous —— model	714:	18	459–465
Majorization			
applied to comparison of variances	555:	12	141–145
Mann-Whitney-Wilcoxon statistic			
as a basis for multiple paired comparisons (tables)	856:	9	561–567
estimating reliability from stress-strain relationships	158:	12	49–54
(letter)	158:	12	719
for evaluating rainfall stimulation experiments	259:	11	149–160

choosing a nonlinear predictor	654:	15	219–231
comparison of some weighted ——	413:	19	313–318
control chart comparisons	729:	8	411–430
effects of estimation errors on geometric ——	897:	14	745–755
graphical method to enhance scatterplots with —— statistics	164:	17	447–454
inefficiencies of arithmetic and geometric ——	821:	14	619–633
inverse autocorrelations of a time series	162:	14	277–298
Moving sums (MOSUMS)			
used for quality control	54:	20	431–436
Multicollinearity			
allowance parameter in ridge regression	668:	19	429–439
biased estimation in linear models	598:	15	497–508
latent root regression	881:	16	513–522
estimation	341:	18	75–83
meaningful —— measures	901:	20	407–412
Multicomponent			
decomposition of —— exponential decays	795:	18	467–482
Multiple classifications			
analysis of multidimensional contingency tables	315:	13	33–61
Multiple classification analysis			
for arbitrary experimental arrangements	114:	10	13–27
Multiple comparisons			
among means, comparison of four procedures	860:	18	89–97
graphical techniques in data analysis	277:	16	287–299
studentized range graph paper for ——	278:	17	181–188
table for making rank sum paired ——	856:	9	561–567
treatment versus control	62:	14	423–436
with a control for normal variances	59:	10	715–718
Multiple comparisons for frequencies			
a graphical method	865:	11	321–329
Multiple correlation (see Correlation, multiple)			
Multiple samples (see Samples, multiple)			
Multiplicative interaction			
stepwise tests for components with ——	917:	20	79–84
Multiplicative treatment effect			
Bayes analysis of —— in weather modification	673:	17	161–166
Multiply-classified			
multiple comparisons with a control for —— normal variances	59:	10	715–718
ranking for —— normal variances	60:	10	693–714
Multinomial distribution (see Distributions, discrete)			
Multinomial samples			
the nested case for incomplete ——	683:	19	59–63
Multiresponse			
analysis of —— data	101:	15	33–51
missing values in —— nonlinear model fitting	108:	12	613–620
Multi-risk model			
for failures and maximum likelihood estimation	401:	13	385–396
Multisample			
nonparametric tests for —— problem	74:	10	578–585
Multivariate data			
analysis of ——	101:	15	33–51
relationship of coefficient vectors of principle components	441:	15	601–610
Multivariate normal distribution (see Normal distribution, multivariate under Distributions, continuous)			
Multivariate regression (Regression, multivariate)			
Multivariate, stationary process			
best linear unbiased estimation for ——	786:	10	523–534

SUBJECT	REF.	VOL.	PAGES
N			
Nearest neighbor			
pairs, atom probe and Markov chain statistics of clustering	464:	16	483–493
Negative binomial distribution (see Distributions, discrete)			
Negative binomial distribution, generalized (see Distributions, discrete)			
Nelder-Mead			
simplex procedure for function minimization	674:	17	45–51
(letter)	674:	17	393–394
Net weight			
acceptance sampling	81:	16	539–543
Network analysis			
GERT, a technique for analyzing reliability problems	894:	12	33–48
Newton-Raphson			
and related algorithms for maximum likelihood variance component estimation	452:	18	11–17
Neyman			
minimum —— chi-square, weighted least squares analysis of Ries-Smith contingency table data	470:	13	438–447
relationship of —— and Bayes confidence intervals for hyper-geometric parameter	816:	10	199–203
Noise			
signal detection in N stationary correlated —— series	785:	13	499–519
Nomograph			
determination of average run length and a —— for CUSUM charts to control normal mean	310:	13	221–230
for derivation of single-stage attribute sampling plans	520:	19	99–100
(letter)	520:	19	351
for discrepancy index measuring goodness-of-fit	884:	8	327–334
(correction)	884:	9	195
Non-additive data			
a new analysis of variance model for ——	568:	13	1–18
biplot as a diagnostic tool for two-way tables	117:	20	47–68
(correction)	117:	20	219
patterns in residuals for the two-way layout	199:	20	385–395
Nonlinear			
approximate confidence intervals for —— functions	205:	20	227–230
derivative-free algorithm for —— least squares	713:	20	7–14
estimation in regression	590:	12	591–612
least squares estimation for —— models	346:	15	209–218
parameters	44:	14	757–766
Nelder-Mead simplex method for function minimization	674:	17	45–51
(letter)	674:	17	393–394
parameter estimation in —— implicit models	123:	15	233–237
predictors	655:	15	1–17
	654:	15	219–231
simplified —— experimental design	105:	13	19–31
some experiences with —— design criteria	106:	12	569–589
Nonlinear integer programming (see Integer programming, nonlinear)			
Nonlinear model			
analysis of multiresponse data	101:	15	33–51
design of experiments for subsets of parameters	408:	16	425–434
elimination of linear parameters from ——	534:	13	461–480
improved parameter estimation	104:	12	219–229
missing values in multiresponse —— fitting	108:	12	613–620
Nonlinear programming			
extreme vertices design of mixture experiments	612:	8	447–456
sample sizes for comparisons of proportions	129:	20	437–440
solution to discrete maximum entropy problem	323:	14	891–897
Nonlinear regression (see Regression, nonlinear)			
Non-normal populations			
example of errors incurred by falsely assuming normality for CUSUM schemes	490:	9	457–464
producer and consumer risks in ——	787:	8	335–343
tests for —— based on nonlinearity in probability plots	516:	19	293–306
Non-normality			
a new test for —— and transformations to normality	835:	14	735–744
effect on tolerance limits	716:	14	571–575
effect on variance component inference	849:	13	635–650
sampling plans with ——	831:	14	669–678
summary of work on variables acceptance sampling with emphasis on ——	697:	11	631–637
Non-normal contamination			
robust regression using p-th power deviations	286:	14	159–166
Nonorthogonal (also see Ridge regression)			
augmenting existing data in multiple regression	304:	10	73–81
designs of even resolution	877:	10	291–299

fitted time series ——	161:	13	713–723
linear regression and minimum sum of relative errors	648:	19	185–190
meaningful multicollinearity measures	901:	20	407–412
mean square error of —— as a variable selection criteria	11:	13	469–481
nonlinear ——	655:	15	1–17
	654:	15	219–231
r-th ordered future observation —— for an exponential distribution	532:	13	725–730
variable selection, data augmentation and a method for ——	12:	16	125–127
Prediction intervals			
at least p out of m future observation from a normal population	280:	19	167–177
based on partial observations in life tests	403:	10	850–853
Bayesian —— and population size assumptions	119:	13	678–681
difference of two future means ——	353:	19	131–134
exponential distribution —— from subsets of the data	482:	16	57–59
failure times —— for exponential life distributions	479:	19	83–86
one-sided —— to contain at least m of k future observations (tables)	362:	15	897–914
quantile estimators for the Weibull and extreme-value distributions	574:	19	87–93
shortest —— for log-linear	768:	13	889–894
simultaneous —— for			
a normal population	149:	10	323–330
failure times	404:	13	397–402
future exponential means	355:	17	341–345
regression models	354:	14	203–214
reliability analysis	405:	18	227–229
s-th ordered observation —— from exponential distribution	550:	16	241–244
two parameter exponential distribution ——	531:	19	469–472
Weibull process ——	539:	20	41–45
	260:	20	167–169
Prediction polynomial			
over-stress life-test experiments	570:	14	437–451
Predictive distribution			
Bayesian —— in life test models	242:	16	455–460
Preference data			
analysis accounting for no —— response	224:	11	309–320
Preference scores			
are —— compatible with the additive model for incomplete block designs	794:	10	613–619
Preliminary test			
ridge analysis following a —— of a shrunken hypothesis	669:	17	431–445
(letter)	669:	18	504
(letter)	669:	18	504–505
Premium			
for several outlier procedures	344:	15	385–404
investigation of rules for dealing with outliers:			
estimation of the mean	347:	11	527–550
estimation of variance	348:	13	101–111
Pre-test estimation			
of simple linear regression model using prior information	712:	18	439–445
Price schedules			
pricing policies based on observed product quality	243:	8	123–134
Pricing policy			
contingent on observed product quality	243:	8	123–134
Principal component			
and biased regression estimation	420:	18	425–437
applied to air pollution data	163:	18	401–409
combined with analysis of variance	800:	14	47–62
cross-validatory estimation of number of components	905:	20	397–405
curve resolution using a postulated chemical reaction	830:	16	353–368
relation between ridge regression and eigenanalysis of augmented correlation matrix	386:	17	477–480
relationships of coefficient vectors in ——	441:	15	601–610
self modeling curve resolution	535:	13	617–633
Prior knowledge			
double-stage estimation in simple regression	8:	14	405–414
pre-test estimation of simple linear regression model using ——	712:	18	439–445
Prizes (see Technometrics prizes)			
Probability			
In —— why does A ⊂ B mean A implies B?	32:	12	707–708
(letter)	32:	13	217
(letter)	32:	14	243
	94:	14	243
Probability density estimation (see Estimation, probability density)			
Probability density function			
series estimation	811:	13	409–424

SUBJECT	REF.	VOL.	PAGES
Probability distributions (see various Distributions headings)			
Probability plots			
confidence bands for minimum fatigue life	756:	16	113–123
correlation tests for normality	281:	17	111–117
goodness-of-fit tests based on non-linearity in ——	516:	19	293–306
in data analysis	277:	16	287–299
modification of and corrections to the original half normal ——	925:	17	189–200
	924:	17	201–211
outlier detection in a two way table	306:	17	1–14
Probit analysis			
for estimating reliability of a simple system	703:	9	197–203
Process control			
approximations to the average run length in CUSUM control charts	724:	17	65–71
comparison of some weighted averages	413:	19	313–318
dual purpose cost based quality control	765:	15	151–166
economic design of attribute control charts	152:	17	81–87
economic design of p-charts to maintain current control	237:	20	235–243
fill weight variation release and control of capsules, tablets and sterile solids	728:	11	161–175
for papermaking	914:	14	481–496
(letter)	914:	14	985–986
(letter)	914:	15	207–208
inefficiency of arithmetic and geometric moving averages	821:	14	619–633
of a Gaussian process	837:	9	29–41
optimal sampling intervals for discrete ——	563:	18	151–160
(correction)	563:	19	224
(letter)	563:	19	224
(correction)	563:	19	522
Process control, automated (see Automated control)			
Process development			
multiple regression in ——	412:	10	257–269
Producer			
determination of single sampling attribute plans with given —— and consumer risk	360:	9	401–415
risk in non-normal populations	787:	8	335–343
Production line inspection			
dynamic programming applied to ——	710:	9	73–81
Product superiority			
prediction interval for difference of future means	353:	19	131–134
Progressively censored samples (see Censored samples, progressively)			
Proportional sampling (see Sampling, proportional)			
Proportion defective (see Percentage defective)			
Protection			
for several outlier procedures	344:	15	385–404
investigation of rules for dealing with outliers:			
estimation of the mean	347:	11	527–550
estimation of variance	348:	13	101–111
Pseudo F-statistic (see F-statistic, pseudo)			
Pseudoinverse (see Matrix, pseudo-inverse)			
Pseudo random numbers (see Random number generation)			
p-th power deviations			
robust regression using ——	286:	14	159–166
Q			
Quadratic forms			
comparison of four designs for estimation of two way design variance components	357:	17	495–500
comparison of some approximate F-tests	203:	15	779–789
minimization subject to linear constraints	19:	13	425–427
Quadratic programming			
restricted least squares regression and ——	580:	11	763–773
	19:	13	425–427
Quadratic regression (see Regression, polynomial)			
Quadrature (see Numerical integration)			
Qualitative data			
short-cut rule for one-sided tests of hypotheses	675:	11	197–200
Quality control			
determination of average run length and a nomograph for CUSUM charts to control normal mean	310:	13	221–230
dual purpose cost based ——	765:	15	151–166
methods for multivariate binomial and Poisson distributions	690:	15	103–112
modified V-mask control scheme	558:	15	833–847
occurrence of n successes in N Bernoulli trials	747:	15	809–818
optimization of —— in the chemical laboratory	432:	8	519–534
three class attribute sampling plans	118:	15	575–585
use of moving sums in ——	54:	20	431–436
Quantile estimators			
for confidence tolerance and prediction intervals on Weibull and extreme-value distributions	574:	19	87–93

SUBJECT	REF.	VOL.	PAGES
Quantiles, sample (see Sample quantiles)			
Quasilinearized regression (see Regression, quasilinearized)			
Quasimidranges			
distribution of —— and associated mixtures	547:	12	311–325
Queueing theory			
reordering policy with instantaneous emergency deliveries	113:	14	931–934
R			
R^2 (see Coefficient of determination)			
Radiolysis			
doubly telescoping sequences of blocks applied to nuclear reactor studies	431:	13	559–574
(letter)	431:	15	947
Rainfall (also see Weather)			
approximate confidence intervals for nonlinear functions	205:	20	227–230
evaluating stimulation experiments	295:	11	149–160
note on a distribution-free CUSUM technique	912:	17	321–325
Randomization			
and experimentation	919:	14	13–22
Random number generation			
for normal random variables	592:	10	401–402
multivariate gamma distribution with non-negative covariance matrix	732:	19	179–183
Random packing			
of particles	311:	16	301–309
Range			
distribution of a variate based of ranges from a uniform population	604:	18	343–349
tolerance limits based on ——	290:	13	651–656
Range, bivariate			
distribution of ——	138:	9	476–480
studentized ——	305:	17	501–505
(letter)	305:	18	365
Rank correlation (also see Correlation)			
nonparametric sequential tests of independence	154:	15	625–631
Ranking and Selection			
comparing two Weibull populations	754:	18	231–235
distribution of a variate based on uniform population ranges	604:	18	343–349
folded normal distributions ——	727:	13	355–369
multivariate normal distribution —— based on generalized variances	308:	12	103–117
Poisson process ——	6:	15	801–808
population parameter —— based on chi-square statistics	753:	17	327–331
Schafer-Rutemiller complete ranking procedure	82:	20	495–496
selecting the most probable category	5:	13	843–850
single stage procedures for ranking multiply-classified normal variances	60:	10	693–714
two-stage subsampling procedure for ranking of means	61:	9	355–364
Rank regression (see Regression, rank)			
Rank tests			
distribution of maximum sum of ranks	671:	9	271–278
sequential ——: modified two-sample procedures	116:	8	615–623
squared —— for cross-over designs	621:	16	13–16
squared —— with existing ties	620:	9	312–314
Rank sum			
table for making —— multiple paired comparisons	856:	9	561–567
Ratios and Reciprocals			
tables of moments for —— of multinomial random variables	90:	12	901–908
Recurrent events			
occurrence of n successes in N Bernoulli trials	747:	15	809–818
Redundancy			
Lagrangian penalty function to obtain optimal ——	319:	12	545–552
Redundant systems			
Bayesian confidence limits for reliability of ——	813:	10	29–36
	844:	17	89–93
Referee problem			
duplicate measurements in the chemical laboratory	852:	17	53–56
Regime			
testimation in a time sequence	726:	13	795–810
Regression			
abuse and use of ——	97:	8	625–629
adaptive distribution-free ——	426:	17	399–407
adequacy of model	407:	20	491–494
a criterion	826:	19	213–216
all possible ——			
calculation of residual sums of squares	632:	14	317–326
efficient computation	757:	10	769–779
with less computation	293:	13	403–408
analysis of mixture data	801:	15	517–528
applications of the pseudoinverse	374:	8	351–359
approximate test for outliers	707:	17	129–132
a restricted least squares problem	873:	16	135–136
a review of D-optimality	823:	17	15–23
a review of design procedures for regression model discrimination	406:	20	15–21
augmenting existing data in multiple ——	304:	10	73–81
calibration models	902:	11	189–192

exact confidence bounds for series system ——	749:	13	535–546
exponential smoothing and ——	325:	13	877–884
failure models based on physics	140:	17	263–268
fiducial, Bayesian and classical frequency inference on —— for the two parameter exponential distribution	701:	15	249–253
fiducial bounds for a series system	329:	13	865–871
exponential parameters	330:	13	873–876
GERT, a technique for —— analysis	894:	12	33–48
growth during a development testing program	46:	8	53–60
(letter)	46:	8	729–730
growth, inference on a Weibull process	539:	20	41–45
hazard plotting for censored failure data	660:	14	945–966
implicit enumeration for proper cut generation	67:	12	775–788
inverse Gaussian distribution as a lifetime model	150:	19	461–468
Lagrangian penalty function to obtain optimal redundancy	319:	12	545–552
mean time of faultless operation	870:	13	904–909
minimum variance unbiased estimation of —— for the truncated exponential distribution	864:	11	609–612
of a system with spares	245:	12	702–705
of an independent component, s-space system	76:	15	529–539
of complex systems with dependent sub.ystem failures	122:	16	245–250
of two exponential series system	863:	12	867–875
optimum age replacement policies for increasing cost factor	758:	13	139–144
optimum censored accelerated life tests for normal and lognormal distributions	663:	18	105–114
point estimation for two parameter Weibull or extreme-value distribution	261:	16	49–56
point estimation of —— for a system of k elements	871:	13	859–864
present status and future expectations for automated control	903:	8	73–89
results for independent censored Weibull and extreme-value samples	38:	15	279–288
selection of greatest exceedance probability	487:	14	219–222
sequential —— assurance in finite lots	869:	11	61–74
sequential screening procedures	584:	16	229–234
simultaneous prediction intervals for —— analysis	405:	18	227–229
tests for zero drift based on first passage time in Brownian motion	639:	15	125–132
tolerance and confidence intervals on the exponential ——	265:	20	37–39
transformations to improve confidence intervals for system ——	137:	20	467–473
Weibull variances and confidence limits for singly censored data	617:	19	473–476
Reliability, Bayesian (see Bayesian reliability)			
Reliability estimation (see Reliability and Estimation, reliability)			
Reliability, transient behaviour of series systems	87:	15	255–269
Renewal theory and processes applied to mixtures of multi-sized particles	760:	11	285–298
sampling mixtures of particles	497:	9	365–371
stochastic model for microscale air pollution from highway traffic	583:	15	353–363
(correction)	583:	15	949
transient reliability of superimposed ——	87:	15	255–269
waiting time for a large gap in an alternating ——	388:	12	697–699
Reordering policy optimum lot size for —— with instantaneous emergency deliveries	113:	14	931–934
Repairing response surface designs	390:	14	767–779
Repair times inverse Gaussian distribution as a life model	150:	19	461–468
Replacement sequential designs for —— in exponential life tests	440:	19	455–459
Replacement policy age —— for truncated normal, gamma and Weibull distributions	307:	9	83–91
with adjustment, depreciation and interest costs	160:	16	235–239
with discounting	714:	18	459–465
block —— for general cost structure	855:	17	291–298
consistent estimation of age —— intervals	439:	18	213–219
economic choice of a life testing procedure for exponential data	85:	14	613–618
optimum age —— with increasing cost factor	758:	13	139–144

Treatments versus a control			
optimal allocation of observations	62:	14	423–436
sample sizes for comparison of two ——	818:	15	915–921
Trend models			
forecasting trending time series with relative growth models	548:	18	261–272
Trimmed estimators			
robustness of efficiency for adjusted —— in regression	370:	19	19–34
Truncated distributions (see specific distribution, truncated)			
Truncated samples (also see Censored samples)			
analysis of variance on ——	142:	8	193
burn-in process estimation	43:	10	51–62
Kolmogorov-Smirnov statistic			
asymptotic distribution percentage points	504:	17	507–510
modified	234:	20	29–32
least squares estimator efficiency from ——	368:	19	265–273
Poisson process estimation for combinations of complete and ——	170:	14	841–846
Truncated sequential hypothesis tests (see Hypothesis tests, sequential)			
t-test			
based on sample percentiles	144:	13	127–137
distribution of —— when sampling from a t-distribution	922:	16	495–497
Monte Carlo study comparing sample means tests	652:	10	509–523

SUBJECT	REF.	VOL.	PAGES
power curves for the two-sample location problem	537:	11	299–307
truncated sequential ——	827:	12	789–798
for general α and β	9:	15	79–86
t-test, bivariate			
required sample sizes for two treatments versus a control	818:	15	915–921
Two-regime data			
using a hyperbola as a transition model to fit two straight-lines	876:	16	369–373
(correction)	876:	17	147
(letter)	876:	17	281
Tukey			
graphical version of —— confidence interval for slippage	746:	10	193–194
Tukey-Duckworth			
one-sided version of —— test	889:	13	901–903
U			
Unbalanced data			
estimating degrees of freedom using Satterthwaite formula	303:	11	691–706
Unbiased estimation (see Estimation, unbiased)			
Undesigned experiments (see Experiments, undesigned)			
Unfolding problem			
particle size determination	666:	11	707–723
Uniform distribution (see Distribution, continuous)			
Uniform shell design			
which response surface design is best	560:	18	411–417
Unmodeled error (see Error, unmodeled)			
Unobservable data			
estimating the distribution of a vector when only the smallest coordinate is observable	642:	12	923–924
U-statistics			
generalized —— for testing equality of two availabilities	147:	15	889–896
V			
Variable projection method			
least squares estimation for nonlinear models	346:	15	209–218
Variable selection			
all possible regressions			
calculation of residual sums of squares	632:	14	317–326
efficient calculation	757:	10	769–779
with less computation	293:	13	403–408
C_p statistic	566:	15	661–675
in regression	492:	13	899–900
(correction)	492:	15	657
discriminant analysis			
comparison of computer programs	349:	19	487–493
computation for ——	600:	17	103–109
two group	608:	18	47–53
fitting equations to data	316:	8	27–51
	909:	15	677–695
general linear model and ——	395:	16	261–273
mean square error of prediction as a —— criterion	11:	13	469–481
properties of linear models estimates with ——	812:	18	283–290
regression			
computational efficiency	522:	12	83–93
latent root	881:	16	513–522
minimum sum of relative errors	648:	19	185–190
multiple ——	55:	12	909–914
(letter)	55:	13	455
regression, subset			
best subset	418:	9	531–540
comparison of procedures	70:	20	1–6
criteria for ——	417:	14	967–970
relationship to data augmentation	12:	16	125–127
simultaneous inference and ——	4:	16	221–227
stepdown procedures in ——	581:	12	621–625
(letter)	581:	13	455–457
Variables sampling (see Sampling plans, variables)			
Variance			
comparison using majorization	555:	12	141–145
double sampling plans where acceptance criteria is ——	927:	10	99–106
estimating differences when comparing two assay methods	742:	17	381–382
(letter)	742:	18	124
(letter)	742:	18	124–125
(letter)	742:	19	350–351
in calibration	784:	14	547–553
multiple comparison with a control for multiply-classified normal ——	59:	10	715–718
normal —— estimation with outliers	465:	20	441–455
of an estimator in variables sampling	890:	12	751–755
of sines and cosines with random arguments	146:	12	693–694
of weighted means	885:	12	757–773
single stage ranking of multiply-classified normal	60:	10	693–714
Variance components			
effects of non-normality on —— inference	849:	13	635–650
estimated —— and weighted means	885:	12	757–773
estimating —— in unbalanced designs	769:	12	207–218
general approach to estimation	498:	9	93–118
	500:	10	551–558
harmonic —— and analysis of variance	442:	11	75–90
maximum likelihood estimation			
algorithms	452:	18	11–17
restricted ——	183:	18	31–38
using the W-transformation	398:	15	819–831
minimum variance quadratic unbiased estimation	828:	20	265–272

SUBJECT	REF.	VOL.	PAGES
nested designs, sampling distributions of ——			
balanced	544:	8	457–468
unbalanced	545:	10	719–737
nested designs, three-stage			
composited samples	252:	16	409–417
estimation	312:	12	487–498
nested designs, two-stage			
comparison of designs and estimation	13:	9	499–516
	846:	17	37–44
with composite samples	515:	9	373–389
subsampling a mixture of materials	124:	14	663–668
systematic versus measurement errors	918:	14	1–11
two-way classification			
comparison of designs for estimation	357:	17	495–500
	635:	20	159–166
estimator properties	556:	18	39–46
type I error and power for Satterthwaite F-statistic	204:	14	555–569
W-transformation	843:	17	511–512
improved algorithm	399:	18	207–211
Variance explained			
estimation of proportion —— by regression	904:	12	915–919
Variance, generalized			
ranking and selection of multivariate normal distributions in terms of ——	308:	12	103–117
simplified selection for multivariate normal populations	721:	18	483–489
Variance minimization			
for response surface designs	350:	11	461–475
Variance patterns			
mixture model for symmetrical error ——	188:	19	237–247
Variational methods			
in experimental design	279:	13	771–793
Virial coefficient			
parameter estimation in nonlinear implicit models	123:	15	233–247
Visual scanning			
models and estimation	745:	14	813–829
	744:	15	67–78
V-mask			
modified —— control scheme	558:	15	833–847
W			
Waiting time			
for a large gap in an alternating renewal process	388:	12	697–699
ranking and selection for Poisson processes	6:	15	801–808
technique for Poisson parameter confidence intervals	178:	13	699–703
Wald			
sequential probability ratio test for correlation coefficient	501:	13	833–841
statistics, weighted least squares analysis of Ries-Smith contingency table data	334:	13	438–447
Wald-Bartlett estimation			
for instrumental variables	565:	11	255–263
Wald distribution (see Distributions, continuous)			
Water storage			
intrayear	866:	12	741–749
Wear			
learning models for processes with tool ——	791:	10	379–387
Wear curves			
analysis of ——	800:	14	47–62
Wear-out			
detection of failure rate increases	554:	15	167–175
Weather			
Bayesian analysis of multiplicative treatment effect in —— modification	673:	17	161–166
squared rank test for —— modification cross-over design	621:	16	13–16
Weibull distribution (see Distributions, continuous)			
—— bivariate (see Distributions, continuous)			
—— reflected (see Distributions, continuous)			
—— truncated (see Distributions, continuous)			
Weibull process			
confidence bounds on the parameters	282:	18	115–117
inference for a ——	539:	20	41–45
prediction intervals	260:	20	167–169
Weighted averages			
comparison of some ——	413:	19	313–318
Weighted regression (see Regression, weighted)			
Welch			
confidence intervals based on —— approximate t-test	209:	17	57–60
Wiener process			
in tests for zero drift	639:	15	125–132
	151:	18	189–193
	693:	18	341–342
Wilcoxon, Frank			
eulogy	240:	8	195–196
Wilcoxon rank sum statistic (see Mann-Whitney-Wilcoxon statistic)			
Wilcoxon rank sum test, bivariate			
power comparison to Hotelling's T^2	77:	13	191–198
Wilk-Shapiro (see Shapiro-Wilk)			

SUBJECT	REF.	VOL.	PAGES
Wind			
speed, inverse autocorrelations of a time series	162:	14	277–293
Windows			
quadratic —— in segment averaging for power spectrum	921:	20	195–200
spectral —— and nonlinear predictors	654:	15	219–231
Winsorization			
analysis with outliers	347:	11	527–550
means	348:	13	101–111
in regression	916:	18	291–300
premium and protection for outlier procedures	344:	15	385–404
Winsorized samples			
efficiency of least squares estimators from ——	368:	19	265–273
Winsorized t-distribution (see t-distribution, Winsorized under Distributions, continuous)			
Wishart distribution (see Distributions, continuous)			
Wood			
subsampling a mixture of material	124:	14	663–668
W-transformation (see transformations)			

SUBJECT	REF.	VOL.	PAGES
X			
X-ray sources			
analysis of stellar ——	751:	15	341–351
$\|X'X\|$ criterion			
augmentation of experimental data to maximize ——	246:	13	682–688
D-optimal fractions for three-level factorial designs	626:	20	369–380
factorial designs and the ——	107:	13	731–742
(correction)	107:	14	511
(correction)	107:	15	430
optimum composite designs	559:	16	561–567
repairing response surface design	390:	14	767–779
Y			
Yates			
extension of —— 2^n algorithm	181:	10	575–577
inverse —— algorithm	433:	8	177–183
order in fraction factorial designs	68:	14	971–972
Youden square			
sequential	208:	12	147–152
Z			
Zone test			
in quality control, first occurance of n successes in N trials	320:	12	627–634

L48. Owen, D. B., letter on paper 50	8 (Aug. '66) 729–730
P	
L49. Patil, S. A., letter on paper 130	14 (May '72) 508
L50. Piersol, Allan G., letter on paper "Estimation of Power Spectra by a Wave Analyzer" by M. B. Priestly and C. H. Gibson (Nov. '65)	8 (Aug. '66) 562–565
L51. Prescott, P., letter on paper 742	18 (Feb. '76) 125
L52. Priestly, Maurice B., response to letter L50	8 (Aug. '66) 565–567
R	
L53. Rothman, Dave, letter on paper 508	10 (May '68) 429–430
S	
L54. Saw, John G., letter on paper 508	12 (Nov. '70) 937
L55. Salsburg, David S., response to letter L43	18 (Feb. '76) 124–125
L56. Scheaffer, Richard L., response to letter L37	19 (Aug. '77) 350
L57. Shubla, G. K., letter on paper 742	19 (Aug. '77) 350–351
L58. Smith, Patricia L., letter on paper 305	18 (Aug. '76) 365
L59. Spendly, W., letter on paper 674	17 (Aug. '75) 393–394
L60. Spurrell, D. J., letter on additional references on variable selection in regression	9 (Aug. '67) 495
T	
L61. Tick, Leo J., letter on "A Reappraisal of the Periodogram in Spectral Analysis" by R. H. Jones (Nov. '65)	8 (Aug. '66) 559–561
L62. Tong, H., letter on paper 857	17 (Aug. '75) 393
V	
L63. Vinod, H. D., letter on papers 423, 424, and 669	18 (Nov. '76) 504
W	
L64. Weinstein, Joseph, letter on paper 201	8 (Aug. '66) 559
L65. Wu, S. M., letter on paper 914	15 (Feb. '73) 207–208
Z	
L66. Zirphile, J., letter on paper 214	17 (Feb. '75) 145
